

HyeongJun Lee

M.S. Student

Department of Aerospace Engineering, Inha University
Inha Aerospace Campus, 36 Gaetbeol-ro, Yeonsu-gu, Incheon 21999, Republic of Korea
hyeongjunlee@inha.edu

EDUCATION

Mar. 2020 ~ Feb. 2026	Inha University Department of Aerospace Engineering <i>B.S. in Aerospace Engineering</i> GPA: 3.85 / 4.5	Incheon, Korea
Mar. 2026 ~ Present	Inha University Department of Aerospace Engineering <i>Master Student</i> GPA: 4.5 / 4.5	Incheon, Korea

RESEARCH INTERESTS

- Control theory
- Reinforcement learning
- Deep learning
- Signal processing
- Mathematical optimization

CONFERENCES

1. Hyeong Jun Lee, Hyoung Do Choi, Jae Hun Kim, Jong-Han Kim, "TCN-based Denoising AutoEncoder for LRF Signal Target Detection," Korea Institute of Military Science and Technology (KIMST) Autumn Conference, Daejeon, Korea (Nov. 2025) - Poster

AWARDS AND HONORS

- Grand Prize - Aerospace Element Design Competition, Institute for Aerospace Industry-Academia Collaboration, Korea (Jun. 2025)
- Encouragement Award - National Industry-Academia Convergence Project Lab Competition, Ministry of Trade, Industry and Energy, Korea (Nov. 2025)
- Excellence Award - Aerospace Capstone Design Final Poster Presentation, Inha University, Department of Aerospace Engineering, Korea (Dec. 2025)
- Outstanding Engineering Student Award, Inha University, Korea (Dec. 2025)

PROJECTS

- AI-based Moving Target Tracking & Situational Awareness using Sensor Networks, Hanwha Aerospace, Korea / Developing a 6-DOF simulation-based smart munition detection system in Unity. Implementing a real-ti (Jan. 2024 ~ Jan. 2025)
- Deep learning model for off-road vehicle state estimation, Hyundai Motor Company, Korea / Developing a deep learning-based vehicle state estimation algorithm for off-road vehicles. (Mar. 2025 ~ Mar. 2026)
- Data-efficient Safe Reinforcement Learning from Human Corrections, Airbus Institute for Engineering Research, United States / Integrating human correction signals to improve safety, stability, and data efficiency for aerospace (Dec. 2025 ~ Present)

SKILLS AND TECHNIQUES

- Programming: Python, MATLAB, C#
- Machine Learning: PyTorch
- Simulation: Simulink, PyBullet, Unity
